---

The Newsycle template comes with flexible theming options that will help you to tune the feel that you need for your website. Choose from three different colour layers (4 background colours, 10 hilites and 10 bottom colours) and create your very own colour combination.

The colour scheme css files can be found in the templates/newscycle/css/hilite folder and are very easy to edit in order to create your own colour palette.

### 1. Select your background colour.
